SOC Services

Bolster Your Security Operations...

As cyber threats become more sophisticated, it's essential for organizations to ensure they have the best protection possible. That's why CyberQ Group's experts in our Security Operations Center (SOC) specialize in everything from protecting your Active Directory to hunting across your network, endpoints and cloud, and are available to you 24x7x365. In a cyber landscape where threats never sleep, neither should your security defense. Ensure the continuity, compliance, and reputation of your organization with round-the-clock, expert security operations.

And Increase Your Visibility With:

- Managed SIEM: CyberQ Group's Managed Security Information and Event Management (SIEM) service is a strategic ally in aggregating, analyzing and correlating data within your organization's applications, devices and servers.

- Managed Endpoint Detection & Response (EDR): By offering continuous monitoring, detection, response, and recovery capabilities, in addition to threat hunting, CyberQ Group seeks to identify and neutralize threats before they can cause damage or steal information.

- Incident Response: CyberQ Group's Incident Response helps you mitigate many of the consequences of an attack by helping your organization outline an IR plan and assist you through that plan when adverse attacks happen.

- Active Directory Security: Safeguard your user management, authentication and authorization with CyberQ Group's Active Directory services that monitors and alerts you to suspicious logins, password changes and failed access attempts.

- Cloud Security Service: Cloud providers like AWS, Azure, and Google Cloud often operate on a shared responsibility model. They secure the infrastructure, but it's up to you to secure the data. CyberQ Group's cloud security service is a multi-layered approach that enables you to mitigate many of the risks inherent in the cloud by aggregating, detecting, analyzing and responding to threat data across your environment.

- Continuous Threat Exposure Management (CTEM): Through simulated cyber-attacks, clients can see how attackers leverage and combine misconfigurations, vulnerabilities, identity exposures, and more, across their AWS, Azure, GCP and on-prem environments. With CyberQ Group's CTEM service, you can see where you are vulnerable, prioritize security efforts and ultimately reduce your organization's breach risk.

What You'll Get

- **Around-the-Clock Monitoring**
- **Expertise on Demand**
- **Compliance and Reporting**
- **Adaptive Security Posture**
- **Immediate Incident Response**
- **Reduced Costs**
- **Peace of Mind**

About Us

CyberQ Group is a global firm on a mission to provide Security Consulting, Risk and SOC Services that help you move toward a state of compliance and resiliency.

When you work with CyberQ Group, cyber intelligence increases, security programs mature and your sensitive data is protected.
