

Configuration Review

Are you confident that your critical cloud services and firewalls are configured to their optimal security posture? Even minor misconfigurations can expose your organisation to significant risk in today's evolving threat landscape.

What is a Configuration Review?

Cyberq Group's Configuration Review Service offers a comprehensive and expert evaluation of your critical digital infrastructure, ensuring robust security and optimal operational efficiency.

Cloud Services:

Microsoft 365: We scrutinise your tenant-wide settings, user access controls, data loss prevention (DLP) policies, email security configurations, and more, identifying potential vulnerabilities and ensuring compliance with best practices.

Google Workspace: Our review covers administrator controls, sharing permissions, data governance settings, mobile device management, and security features to safeguard your collaborative environment.

Cloud Providers (AWS/Azure/GCP): We assess your Identity and Access Management (IAM), network configurations (VPC, Security Groups, NACLs), data storage security, and other critical services to ensure a secure and well-architected cloud presence. These reviews can be scoped to an entire tenancy or a specific project.

Firewalls:

We analyse your firewall rulesets, access controls, logging configurations, and firmware versions to identify weaknesses, optimise performance, and ensure they effectively protect your network perimeter.

What are the Outcomes of our Configuration Review Service?

Following a CyberQ Group Configuration Review, you will receive:

A comprehensive report: This detailed document outlines our findings, clearly highlighting any identified vulnerabilities, misconfigurations, and areas for improvement across the reviewed systems.

Risk assessment: We will quantify the potential business impact of identified vulnerabilities, enabling you to make informed decisions about resource allocation and risk mitigation.

A clear understanding of your security baseline: You'll gain a transparent view of your current security configuration, providing a solid foundation for future security initiatives.

Prioritised recommendations: We don't just point out problems; we provide clear, actionable recommendations, prioritised based on risk and impact, to guide your remediation efforts.

Best Practice Guidance: Our consultants will share industry best practices and insights tailored to your specific environment, empowering your team to maintain a robust security posture.

What are the Business Benefits?

Investing in our Configuration Review Service delivers tangible business advantages:

Reduced Security Risk: By identifying and addressing vulnerabilities proactively, you significantly minimise the likelihood of costly security breaches, data loss, and reputational damage.

Enhanced Operational Efficiency: Optimised configurations can improve system performance, reduce administrative overhead, and ensure smoother business operations.

Cost Savings: Preventing security incidents and optimising resource utilisation ultimately leads to significant cost savings in the long run.

Improved Compliance: Our reviews help ensure your configurations align with relevant industry regulations and compliance standards (e.g., GDPR, Cyber Essentials), avoiding potential fines and legal issues.

Increased Confidence: Knowing your critical systems have been rigorously reviewed by experts provides peace of mind and strengthens stakeholder trust.

Stronger Security Posture: A thorough configuration review is a fundamental step in building a resilient and robust overall security posture for your organisation.

The Numbers That Matter:

75% of organisations uncover critical misconfigurations during their first review, vulnerabilities often missed by automated tools.

93% of breach pathways identified in penetration tests stem from configuration weaknesses.

For every £1 invested, clients typically prevent over **£20 in potential breach costs** through proactive hardening.

85% of clients renew annually, reflecting measurable improvements in security and lasting trust in CyberQ Group's expertise.

Why CyberQ Group?

Collaboration

We work closely with our partners to mutually provide help and inspiration in our continual efforts in striving for cyber resilience.

Expertise

Our people are highly experienced, certified consultants, with international experience and proven track records.

Innovation

We continually seek to deliver what enables global organisations to achieve a higher level of security maturity and capability.

About CyberQ Group

Established in 2016, CyberQ Group's global team of cyber and business professionals have decades of combined experience within the cyber and technology sectors. We believe even the most daunting challenges can be overcome through collaboration, innovative technology and great people.

We bring together the best of all these components, keeping your business better protected. The result? Improved business risk profile, significant operational cost savings and long-term peace of mind.

Get in touch today to find out how we can keep your business secure.
