

Vulnerability Assessment

Identifying vulnerabilities internally and externally within your company is an important first step for any organisation to improve their security posture. However, maintaining the security equilibrium is challenging as network environments are constantly evolving, new services are being offered, and new security vulnerabilities are constantly being discovered.

CyberQ Group VSaaS

CyberQ Group Vulnerability Scanning as a Service (VSaaS) will determine your organisation's exposure to attacks internally and externally in an efficient and cost-effective way. We will conduct continuous scans across your infrastructure to regularly assess your internal networks, internet perimeter, and security. Our award-winning, easy-to-understand reports provide clear and actionable recommendations to remediate any security issues identified.

Why VSaaS?

Boards are increasingly demanding greater insight to make informed decisions in managing risk and delivering better business outcomes. Usually, compliance and regulatory requirements drive Vulnerability Assessments. However, all organisations need to ensure they have the latest information about their security posture.

Vulnerability Assessment and Monitoring are key cornerstones of security maturity in any organisation.

We will provide regular reporting and security metrics of your organisation with clear and well-written vulnerability advice, conducted by a CyberQ Group expert. The service also provides statistical trends on the security posture of your organisation's internet footprint.

What You Get

CyberQ Group security professionals will provide an easy-to-understand report and actionable recommendations to improve the security maturity of your organisation. This will also include:

Weekly and monthly reports depending on the client's requirements.

A dedicated CyberQ Group expert to provide meaningful information to manage and reduce the risk of vulnerabilities exposed.

Asset Inventory and Asset Visibility reports, know what's in your environment, how many machines are in your system to know what you're protecting.

Online client dashboard to provide an overview of your organisation's maturity. The ability to show **trends around vulnerabilities** and information to show improvements to senior executives.

How It Works

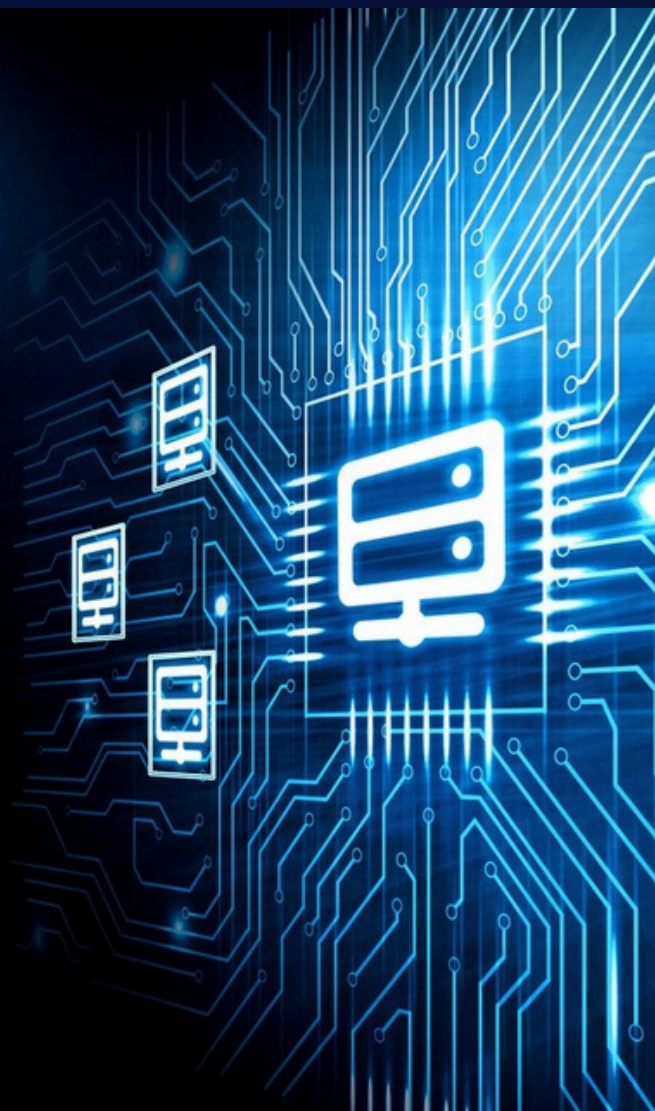

The vulnerability assessment, monitoring, and alerting service reduces an organisation's exposure to external and internal threats by regularly scanning and assessing your internet-facing devices and services.

CyberQ Group experts will scan your public IP address space (i.e. exposed internet IP addresses) of all the internet connections and internet-connected services.

The service is designed to the highest security standards and follows industry best practices and architectural guidelines.

Start taking control of your company's vulnerabilities today by subscribing to the award-winning Vulnerability Assessment service from CyberQ Group. Get in touch:
