

CONTINUOUS BREACH DETECTION SERVICE

Get a complete external digital footprint of what sits outside your organisation that could be exploited by adversaries.

Continuous Breach Detection Service monitors the external environment and gives you a unique line of sight of your online presence.

By monitoring the surface, deep and dark web we listen for what's being said about your organisation from outside and within; Are account details being shared on the dark web?

Is your intellectual property (IP) or data at risk? Is your brand being misused without your knowledge?

We help you evaluate potential threats so you can prioritise and co-ordinate your resources more effectively.

Building the business case for Continuous Breach Detection Service in your organisation

- Introduce threat intelligence gathering and evaluation in your organisation
- Monitor your brand for misuse and tackle infringements
- Learn if accounts are being compromised and data leaked to publicly available websites
- Avoid reputational damage with senior executives profiling to detect potential vulnerabilities
- Monitor for industrial/corporate espionage and intellectual property theft

THREAT ALERTS

By assessing various risk parameters and threats including analysis and filtering of data from compromised accounts and data leakage, we streamline the detect to response process.

Identifying unusual behaviour and understanding what's normal and what isn't means we can alert you to actual threats and malicious activity so you can take decisive action before damage occurs.
